      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a cDNA encoding mouse interleukin (II)-17 creceptor related protein (Evi27). Mouse Evi27 gene was mapped to chromosome 14. Evi27; is a common site of retroviral integration in BXH2 murine myeloid leukaemias. Evi27 cDNA sequences are useful as antisense molecules to inhibit Evi27 protein or for chromosomal mapping or mutational analysis of Evi27 protein. They are proviral integration sites associated with leukaemias and monitoring this site provides a genetic tag for disease gene identification. The proteins of the invention are useful to stimulate the secretion of proinflammatory cytokines such as IL-8 and plays an important role in the developmental and/or disease processes of haematopoietic cells. Hence modulating the expression of Evi27 at the RNA or protein level is used in the treatment of diseases such as cancer or autoimmune diseases.

Evi27 is a common site of retrovital integration in BXH2 murine myeloid leukaemias. Evi27 cDNA sequences are useful as antisense molecules to inhibit Evi27 protein or for chromosomal mapping or mutational analysis of Evi27 protein. They are proviral integration sites associated with leukaemias and monitoring this site provides a genetic tag for disease gene identification. The proteins of the invention are useful to stimulate the secretion of proinflammatory cytokines such as IL-8 and plays an important role in the developmental and/or disease processes of haematopoietic cells. Hence modulating the expression of Evi27 at the RNA or protein level is used in the treatment of diseases such as cancer or autoimmune diseases.
                                                                                                                                                                                           1113 TTCACATTCCCAGGCTGCCTAAACCACGTAATGAAATATAAAAAGCAGTGCACTGAGGCG 1172

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
This sequence represents human cDNA encoding a secreted protein. The cinvention relates to sequences AAA87725-A87774 which encode human secreted proteins AAB25763-B25812. The proteins include signal peptides. Included in the invention are a host cell containing one of the cDNA sequences, and a purified antibody capable of binding to one of the secreted proteins. Also contained in the invention are methods for storing the sequence data on a computer system, and a method for identifying features of the cDNA sequences using a computer programme. The cDNAs are useful for expressing secreted proteins or fragments to obtain annibodies capable of specifically binding to the secreted proteins. The cDNAs may also be useful in diagnostic, forensic, gene therapy and chromosome mapping procedures and may be used to design expression vectors and secretion vectors. The proteins of the invention may be used to treat diseases including cancer, autoimmne diseases, cardiovascular disorders, cystic fibrosis, hypothyroidism, immunological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cystic fibrosis; hypothyroidism; immunological disorder; amyloidosis; brain disorder; skeletal muscle disorder; eye disorder; obesity; mitochondriocytopathy, diabetes; atherosclerosis; Alzheimer's disease; neurodegeneratiye disorder; graft rejection; dementia; hyperlipidaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1927

                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to primate and rodent DNAX cytokine receptor subunit (DCRS) polypeptides and the polynucleotides encoding them. The receptors, or their portions may be useful as phosphate labelling enzymes to label general or specific substrates. The subunits may also be functional immunogens to elicit recognising antibodies, or antigens capable of binding antibodies. A combination, e.g., including a DCRS can be used as an immunogen for the production of antisera or antibodies capable of distinguishing between other cytokine receptor family members. A purified DCRS can also be used as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to antibody production to the

                                                                                                                                                                                                          treatment of Parkinson's disease, Huntington's disease and Alzhein disease), to modulate activin and inhibin activity (e.g. for contractivity, to modulate chemotactic and chemokinetic activity, to modulate haemostatic and thrombolytic activity, to modulate recept ligand activity, to modulate inflammation and to inhibit tumour grant productions of the contractivity of the contractivity is modulate inflammation and to inhibit tumour grant products and the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity of the contractivity
                                                                                                                                                                                                                                                                                                             supplements, to modulate cytokine and cell proliferation activity, to modulate immune stimulation or suppression (e.g. for the treatment of microbial infections and autoimmune disorders such as multiple sclerosis, rheumatoid arthritis and insulin-dependent diabetes), to modulate haematopoiesis, to modulate tissue growth activity (e.g. for the treatment of Parkinson's disease, Huntington's disease and Alzheimer's disease and Farkinson's disease and Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is human protein with hydrophobic domain encoding cDNA clone HP10758. The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The polynucleotides may be used to produce the polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The polynucleotides and its complementary sequences may also be used as DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human proteins with hydrophobic domains and the nucleic acids encoding them, useful for preventing diagnosing and treating e.g. cancer, Alzheimer's and inflammation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Kato
                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          probes in diagnostic assays and also used in gene therapy. The polypeptides may also be used as antigens in the production of antibodi and in assays to identify modulators of polypeptide expression and activity. The polypeptides and nucleic acids may be used as nutritional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 4;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA of the invention.

                                                                                                                                                                                                                                                                                                                   The present invention relates to novel human nucleic acids encoding interleukin 17 (IL-17) receptor like proteins. The present sequence is one such coding sequence. The IL-17 receptor-like proteins and coding sequences are useful for treating a pathological condition related to immune system dysfunction (e.g. psoriatic arthritis), infections (e.g. viral infections), weight disorders (e.g. obesity), neuronal dysfunction disorders (e.g. aczema), kidney disorders (e.g. slomerulonephritis), bone disease (e.g. osteoporosis), vascular system disorders (e.g. lectematic, eye disorders, reproductive disorders, tumours and inflammatic.

Human Evi27 gene was mapped to chromosome 3p21. Evi27 is a common site of retroviral integration in BXH2 murine myeloid leukaemias. Evi27 cDNA sequences are useful as antisense molecules to inhibit Evi27 protein or for chromosomal mapping or mutational analysis of Evi27 protein. They are proviral integration sites associated with leukaemias and monitoring this site provides a genetic tag for disease gene identification. The proteins of the invention are useful to stimulate the secretion of proinflammatory cytokines such as IL-8 and plays an important role in the developmental and/or disease processes of haematopoietic cells. Hence modulating the expression of Evi27 at the RNA or protein level is used in the treatment of diseases such as cancer or autoimmune diseases.

The invention relates to nucleic acid molecules encoding Interleukin 17 (II-17)-like polypeptides. II-17 DNA can be used to modulate the levels of II-17 protein in an animal. The II-17 protein is useful for treating CC preventing or ameliorating a disease, such as immune system dysfunction CC (rheumatoid arthritis, osteoarthritis, inflammatory joint disease); CC autoimmune (multiple sclerosis, lupus, diabetes, inflammatory bowel CC disease, transplant rejection, graft vs. host disease); infections (HIV, CC (hepatitis, bacterial); weight disorders (obesity, anorexia, cachexia, sepsis); neuronal dysfunction (Alzheimer's, Parkinson's disease); lung CC (acute respiratory distress syndrome, cystic fibrosis, emphysema); skin CC (osteoporosis, Paget's disease, hypercalcaemia) twascular system (epilepsy CC atherosels, heart failure, angiogenesis); tumours, cancers (lymphoma CC atherosels, heart failure, angiogenesis); tumours, cancers (lymphoma CC inflammation. The present sequence is human Interleukin-17 receptor B-2 (III-1788-2) NA
                                                                                                                                                                                                                                                                                                                                Nucleic acid molecules encoding Interleukin 17 (IL-17) - like polypeptides useful in the treatment, prevention and diagnosi diseases e.g. cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              eczema; sepsis; psoriasis; wound healing; osteoporosis; Paget's disease; epilepsy; atherosclerosis; heart failure; angiogenesis; endometriosis; leukaemia; retinal neuropathy; infertility; miscarriage; inflammation; cancer; diabetes; ds.

                                                                                                                                                                                                The present invention relates to novel human nucleic acids encoding interleukin 17 (IL-17) receptor like proteins. The present sequence is one such coding sequence. The IL-17 receptor-like proteins and coding sequences are useful for treating a pathological condition related to immune system dysfunction (e.g. psoriatic arthritis), infections (e.g. viral infections), weight disorders (e.g. obesity), neuronal dysfunction disorders (e.g. Alzheimer's disease), lung disorders (e.g. asthma), skin disorders (e.g. oczema), kidney disorders (e.g. glomerulonephritis), bone disease (e.g. osteoporosis), vascular system disorders (e.g. ischaemia), eye disorders, reproductive disorders, tumours and
                                                                              1113
                                                                                                                                                                                                                                                                                                                                                                         Three human nucleic acids encoding interleukin 17 (IL-17) receptor like polypeptides, useful for treating, diagnosing, ameliorating or preventing immune system disorders (e.g. psoriatic arthritis) and infections (e.g. viral infections) -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Jing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; interleukin-17 receptor B-3; IL-17RB-3; immune system dysfunction; cytostatic; multiple sclerosis; rheumatoid arthritis; therapy; lupus; inflammatory bowel disease; neuronal dysfunction; transplant rejection; autoimmune disorder; lung; skin; kidney; bone; eye; vascular system; infection; hepatitis; obesity; anorexia; cachexia; glomerulonephritis; cystic fibrosis; Alzheimer's disease; Parkinson's disease; emphysema; eczema; sepsis; psorilasis; wound healing; osteoporosis; Paget's disease; epilepsy; atherosclerosis; heart failure; angiogenesis; endometriosis; leukaemia; retinal neuropathy; infertility; miscarriage; inflammation;
                                                                                                                                                                                                                                         The invention relates to nucleic acid molecules encoding Interleukin 17 (IL-17)-like polypeptides. IL-17 DNA can be used to modulate the levels of IL-17 protein in an animal. The IL-17 protein is useful for treating, preventing or ameliorating a disease, such as immune system dysfunction

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT
                                        The present invention relates to novel human nucleic acids encoding interleukin 17 (IL-17) receptor like proteins. The present sequence is one such coding sequence. The IL-17 receptor-like proteins and coding sequences are useful for treating a pathological condition related to immune system dysfunction (e.g. psoriatic arthritis), infections (e.g. viral infections), weight disorders (e.g. obesity), neuronal dysfunction disorders (e.g. Alzheimer's disease), lung disorders (e.g. asthma), skin disorders (e.g. eczema), kidney disorders (e.g. glomerulonephritis), bone disease (e.g. osteoporosis), vascular system disorders (e.g. lischaemia), eye disorders, reproductive disorders, tumours and
                                                                                                                                                                                                                                        Three human nucleic acids encoding interleukin 17 (IL-17) receptor polypeptides, useful for treating, diagnosing, ameliorating or preventing immune system disorders (e.g. psoriatic arthritis) and infections (e.g. viral infections) -
                                                                                                                                                                                                                                                                                                                                                               Jing
                                                                                                                                                                                                               Claim
                                                                                                                                                                                                                                                                                                                                    WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                         16-MAR-2000; 2000US-189923P.

The IL17RLP polypeptide is useful for screening for agonists and antagonists. These antagonists and agonists are useful for treating, diagnosing, detecting and or preventing disorders related to cellular activation; haemostasis, angiogenesis, tumour metastasis, cellular migration, ovulation or neurogenesis, such as osteoporosis,
